

Correlation of Top 30 Functional Features with HAC Score

- metabolism
- redox reactions
- regulatory domains
- ATPase and ATP-dependent functions
- Mobile genetic elements and DNA recombination
- Respiratory energy metabolism
- Cell-surface adhesion and protein interaction
- Multidrug transport and resistance
- Secondary metabolite biosynthesis
- Cell-surface carbohydrate biosynthesis
- Nucleic acid binding and regulatory functions
- Signal transduction and transcriptional regulation
- Central carbon metabolism
- Oxidative stress response and heme metabolism
- Translation and protein synthesis
